What is Acousticoat™?

Acousticoat™ is a soundproof paint applied using a two-step process: two layers of a “mass-building” Base Coat followed by two layers of a “resilient” Finish Coat. By increasing surface mass, Acousticoat™ reduces sound transmission through internal walls and ceilings.

Sound Reducing Paint.

Acousticoat is a spray on interior coating that can be applied applied via airless spray or roller to help reduce sound projections.

- Can be applied like any other paint
- Effective Sound Reduction
- Cancels out most noise transmission
- Can be applied by a single person
- Saves on labour costs
- Waterborne
- Resistant to Water, Mould and Mildew.

Frequently asked questions!

Why Choose Acousticoat™ ?

How Acousticoat™ Works?

The Base Coat forms a resilient nano-membrane layer that absorbs and deflects sound.

The Finish Coat adds mass to improve the surface's sound-blocking properties.

- ✓ Scientifically formulated
- ✓ Consistent acoustic results
- ✓ Paint or wallcovering-ready
